Lightning Talk

Keep it simple

Sometimes you
don't need to embed
a Chrome browser.

“

Sales person

Our sales employees would like a desktop app to calculate prices!

We are very sad, please create.

“

No problem. I'll have a
desktop app ready for you
after lunch.

Developer person

”

Wails

Create new app

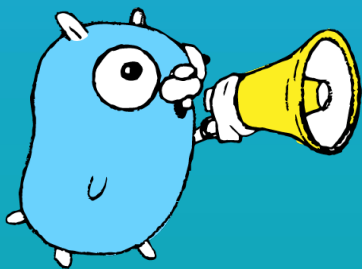

```
$ wails init -n priceui -t vue-ts
```

Run app

```
$ wails dev
```

```
$ wails build
```

If both discounts are active then they are applied *one after the other* — not added together.

Code and scripts:
